2. Upgrade Steps

Upgrade By USB Disk

Step 1

Prepare one USB disk which memory less than 32G, and format it to FAT32.

Step 2

Check the base station hardware version from version info page(H000, H001 or H002). download the upgrade files from the link and select the corresponding upgrade file, and then put it to the root directory of the USB flash.

Step 3

Connect the USB disk to the base station, and the device will start the upgrade automatically, after upgrade successful, the base station will reboot automatically.

Step 4

Connect the belt pack to the base station one by one, and the belt pack will be recognized for upgrade.

Upgrade By Browser Based software

Step 1

Check the base station hardware version from version info page(H000, H001 or H002), and then connect the base station via WiFi or LAN

- a. Connecting to the base station via Wi-Fi
- Turn on the Wi-Fi under the network settings on the Solidcom M1 front panel.

Network Sett		5
